

ABSTRACT

Please amend the abstract as follows:

An eductor [(1)] having an air gap [(5)], a venturi structure [(3)], and a non-return valve [(19)] located in the air gap [(5)]. The non-return valve is removable and allows the eductor to be operated as an air gap eductor or a non-return valve eductor. A non-return valve cartridge [(19)] for installing in to the air gap [(5)] of an air gap eductor [(1)], so that the eductor can be operated as a non-return valve eductor. A method of retrofitting a non-return valve [(19)] in an air gap eductor [(1)].
